II. INTRODUCTION

A. Risk Factors

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- Kotak FMP 370 days Series 9 is only the name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.2,50,000 made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors

- a) The portfolio of Kotak FMP 370 days Series 9 will comprise of securities issued by central and state government as also debt & money market instruments issued by corporates as mentioned under the paragraph 'How will the Scheme allocate its assets'. All such securities will normally mature on or before maturity of the scheme. As the securities are normally held to maturity, the interest rate risk is significantly mitigated. The debt securities issued by the corporates do carry a credit risk as also the liquidity risk.
- b) The Scheme will invest entirely in Debt/ Money Market Instruments and Government securities. Liquidity in these investments may be affected by trading volumes, settlement periods and transfer procedures. These factors may also affect the Scheme's ability to make intended purchases/sales, cause potential losses to the Scheme and result in the Scheme missing certain investment opportunities.
- c) Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry higher amount of risk than government securities. Further, even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- d) The market price of Kotak FMP 370 days Series 9 like any other listed security, is largely dependent on two factors, viz., (1) the intrinsic value of the unit (or NAV), and (2) demand and supply of units in the market. Sizeable demand or supply of the units in Exchange may lead to market price of the units to quote at premium or discount to NAV. Hence the price of the units is likely to hold significant variance (large premium or discount) from the latest declared NAV all the time.

SPECIFIC RISKS IN DEBT MARKETS AND CAPITAL MARKETS

Investments in Financial Instruments are faced with the following kinds of risks.

Risks associated with Debt / Money Markets (i.e. Markets in which Interest bearing Securities or Discounted Instruments are traded)

a) Credit Risk:

Securities carry a Credit risk of repayment of principal or interest by the borrower. This risk depends on micro-economic factors such as financial soundness and ability of the borrower as also macro-economic factors such as Industry performance, Competition from Imports, Competitiveness of Exports, Input costs, Trade barriers, Favourability of Foreign Currency conversion rates, etc.

Credit risks of most issuers of Debt securities are rated by Independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"), with about 6 distinct ratings between the two extremes.

The highest credit rating (i.e. lowest credit risk) commands a low yield for the borrower. Conversely, the lowest credit rated borrower can raise funds at a relatively higher cost. On account of a higher credit risk for lower rated borrowers lenders prefer higher rated instruments further justifying the lower yields.

b) Price-Risk or Interest-Rate Risk:

From the perspective of coupon rates, Debt securities can be classified in two categories, i.e., Fixed Income bearing Securities and Floating Rate Securities. In Fixed Income Bearing Securities, the Coupon rate is determined at the time of investment and paid/received at the predetermined frequency. In the Floating Rate Securities, on the other hand, the coupon rate changes - 'floats' - with the underlying benchmark rate, e.g., MIBOR, 1 yr. Treasury Bill.

Fixed Income Securities (such as Government Securities, bonds, debentures and money market instruments) where a fixed return is offered, run price-risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, the payment-frequency of such coupon, days to maturity and the increase or decrease in the level of interest rates. The prices of Government Securities (existing and new) will be influenced only by movement in interest rates in the financial system. Whereas, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced not only by the change in interest rates but also by credit rating of the security and liquidity thereof.

Floating rate securities issued by a government (coupon linked to treasury bill benchmark or a real return inflation linked bond) have the least sensitivity to interest rate movements, as compared to other securities. The Government of India has already issued a few such securities and the Investment Manager believes that such securities may become available in future as well. These securities can play an important role in minimizing interest rate risk on a portfolio.

c) Risk of Rating Migration:

The following table illustrates the impact of change of rating (credit worthiness) on the price of a hypothetical AA rated security with a maturity period of 3 years, a coupon of 10.00% p.a. and a market value of Rs. 100. If it is downgraded to A

category, which commands a market yield of, say, 11.00% p.a., its market value would drop to Rs. 97.53 (i.e. 2.47%) If the security is up-graded to AAA category which commands a market yield of, say, 9.00% p.a. its market value would increase to Rs102.51 (i.e. by 2.51%). The figures shown in the table are only indicative and are intended to demonstrate how the price of a security can be affected by change in credit rating.

Rating	Yield (% p.a.)	Market Value (Rs.)
AA	10.00	100.00
If upgraded to AAA	9.00	102.51
If downgraded to A	11.00	97.53

d) Basis Risk:

During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio. Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve.

e) Spread Risk:

In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However depending upon the market conditions the spreads may move adversely or favourably leading to fluctuation in NAV.

f) Reinvestment Risk:

Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently the proceeds may get invested at a lower rate.

g) Liquidity Risk:

The corporate debt market is relatively illiquid vis-a- vis the government securities market. There could therefore be difficulties in exiting from corporate bonds in times of uncertainties. Liquidity in a scheme therefore may suffer. Even though the Government Securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through. In view of this, redemption may be limited or suspended after approval from the Boards of Directors of the AMC and the Trustee, under certain circumstances as described in the Statement of Additional Information (SAI).

B. Requirement of Minimum Investors in the Scheme

The Scheme and individual Plan(s) under the Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan(s). These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme/Plan(s) shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 business days of the date of closure of the New Fund Offer.

III. INFORMATION ABOUT THE SCHEME

Kotak FMP 370 days Series 9

A. Type of the scheme:

A Close ended debt scheme.

B. What is the investment objective of the scheme?

The investment objective of the Scheme is to generate returns through investments in debt and money market instruments with a view to significantly reduce the interest rate risk.

However, there is no assurance or guarantee that the objective of the Scheme would be achieved.

C. How will the scheme allocate its assets?

The asset allocation under the Scheme, under normal circumstances, will be as follows:

Investments	Indicative Allocation (% to net assets)	Risk Profile
Debt and Money Market instruments and government securities	100	Low to medium

The scheme will not invest in securitised debt

Portfolio Rebalancing:

The asset allocation if altered for short term defensive consideration will be rebalanced with 30 days.

Overview of Debt Market

The Indian Debt Market has grown in size substantially over the years. The Reserve Bank of India has been taking steps to make the Indian Debt Market efficient and vibrant. Broadly, the debt market is divided in two parts viz. the Money Market and the Debt market. Money market instruments have a tenor of less than one year while debt market instruments have a tenor of more than one year. Money market instruments are typically commercial paper, certificates of deposit, treasury bills, trade bills, repos, interbank call deposit receipts etc. Debt market comprises typically of securities issued by Governments (Central and State), Banks, Financial Institutions, and Companies in the private and public sector, Corporations, Statutory Bodies etc.

The debt securities are mainly traded over the telephone directly or through brokers. The National Stock Exchange of India has a separate trading platform called the Wholesale Debt Market segment where trades put through member brokers are reported.

RBI has introduced the Negotiated Dealing System (NDS) platform for screen-based trading in Government Securities and Money Market instruments. Most of the market participants are now operating through NDS.

Promoted by major banks and financial institutions, The Clearing Corporation of India Ltd. (CCIL) was incorporated on April 30, 2001. The CCIL guarantees the settlement of all trades executed through NDS. The clearing and settlement risks viz., Counter party Credit Risk and Operational Risk are mitigated by CCIL thereby facilitating a smooth settlement process.

The following table gives approximate yields prevailing as on

October 5, 2010 on some of the money and debt market instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing.

Investments	Yield Range (% per annum)
Inter bank Call Money	6.00 - 6.10
91 Day Treasury Bill	6.20 - 6.30
364 Day Treasury Bill	6.60 - 6.75
P1+ Commercial Paper 90 Days	7.50 - 7.75
3-Year Government of India Security	7.51 - 7.30
5-Year Government of India Security	7.70 - 7.80
10-Year Government of India Security	7.90 - 8.00

Generally, for instruments issued by a non-Government entity, the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on the credit rating of the entity. Investors must note that the yields shown above are the yields prevailing on October 5, 2010 and they are likely to change consequent to changes in economic conditions and RBI policy.

D. Where will the scheme invest?

The amount collected under the scheme will be invested only in debt and money market instruments and government securities. Subject to the Regulations, the amount collected under this scheme can be invested in any (but not exclusively) of the following securities/ debt instruments:

E. What are the investment strategies?

For the purpose of achieving the investment objective, the Scheme will invest in a portfolio of Debt and Money Market securities only, maturing on or before maturity of the Scheme.

The AMC has an internal policy for selection of assets of the portfolio. The portfolio is constructed taking into account ratings from different rating agencies, rating migration, credit premium over the price of a sovereign security, general economic conditions and such other criteria. Such an internal policy from time to time lays down maximum/minimum exposure for different ratings, norms for investing in unrated paper, liquidity norms, and so on. Through such norms, the Scheme is expected to maintain a high quality portfolio and manage credit risk well.

Investment in unrated debt securities will be made with the prior approval of the Board of the AMC. Such investments would be within the parameters approved by the Board of the Trustee. Where the proposed investment is not within the parameters as mentioned above, approval of the Boards of both the AMC and the Trustee will be taken before making the investment. Investment in unrated debt securities will be made subject to prescribed SEBI Regulations.

Investments may be made in instruments, which, in the opinion of the Fund Manager, are of an acceptable credit risk and chance of default is minimum. The Fund Manager will generally be guided by, but not restrained by, the ratings announced by various rating agencies on the assets in the portfolio.

Risk Control Measures for investment strategy

The internal systems have all the SEBI limits incorporated. This ensures that all limits are tracked at the entry stage itself. The system has the capability to alert certain deals that require special attention in case they are beyond certain prescribed parameters. The deals then cannot proceed further without the approval of the appropriate authority. Thus checks are in place to ensure no breach of limit occurs.

D. COMPUTATION OF NAV

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date.

The Fund shall value its investments according to the valuation norms, as specified in the Eighth Schedule of the Regulations, or such guidelines / recommendations as may be specified by SEBI/AMFI from time to time. The broad valuation norms are detailed in the Statement of Additional Information.

NAV of Units under the Scheme will be calculated as shown below:

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current assets including Accrued Income} - \text{Current Liabilities and provisions including accrued expenses}}{\text{No. Of Units outstanding under the Scheme/ Option.}}$$

NAV for the Scheme and the repurchase prices of the Units will be calculated and announced at the close of each Business Day. The NAV shall be computed upto four decimals.

Computation of NAV will be done after taking into account dividends declared, if any, and the distribution tax thereon, if applicable. The income earned and the profits realized in respect of the Units remain invested and are reflected in the NAV of the Units.
