II. INTRODUCTION

A. Risk Factors

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- Kotak Quarterly Interval Plan Series 1, Kotak Quarterly Interval Plan Series 2, Kotak Quarterly Interval Plan Series 3, Kotak Quarterly Interval Plan Series 4, Kotak Quarterly Interval Plan Series 5, Kotak Quarterly Interval Plan Series 6, Kotak Quarterly Interval Plan Series 7, Kotak Quarterly Interval Plan Series 8, Kotak Quarterly Interval Plan Series 9 and Kotak Quarterly Interval Plan Series 10 are only the name of the Schemes and do not in any manner indicate either the quality of the schemes or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 2,50,000 made by it towards setting up the Fund.
- No scheme under this SID is a guaranteed or assured return scheme.

Scheme Specific Risk Factors:

- The portfolio of Kotak Quarterly Interval Plan Series 1, Kotak Quarterly Interval Plan Series 2, Kotak Quarterly Interval Plan Series 3, Kotak Quarterly Interval Plan Series 4, Kotak Quarterly Interval Plan Series 5, Kotak Quarterly Interval Plan Series 6, Kotak Quarterly Interval Plan Series 7, Kotak Quarterly Interval Plan Series 8, Kotak Quarterly Interval Plan Series 9 and Kotak Quarterly Interval Plan Series 10 will comprise of securities issued by central and state government as also debt & money market instruments issued by corporates as mentioned under the paragraph 'How will the Scheme allocate its assets'. All such securities will normally mature in line with the maturity profile of the scheme. As the securities are normally held to maturity, the interest rate risk is significantly mitigated. The debt securities issued by the corporates do carry a credit risk as also the liquidity risk.
- The Schemes will invest entirely in Debt/ Money Market Instruments and Government securities. Liquidity in these investments may be affected by trading volumes, settlement periods and transfer procedures. These factors may also affect the Scheme's ability to make intended purchases/sales, cause potential losses to the Scheme and result in the Scheme missing certain investment opportunities.
- Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry higher amount of risk than government securities. Further, even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- **Risks associated with Securitised Debt:**
The Schemes may from time to time invest in domestic securitised debt, for instance, in asset backed securities (ABS)

or mortgage backed securities (MBS). Typically, investments in securitised debt carry credit risk (where credit losses in the underlying pool exceed credit enhancement provided, (if any) and the reinvestment risk (which is higher as compared to the normal corporate or sovereign debt). The underlying assets in securitised debt are receivables arising from automobile loans, personal loans, loans against consumer durables, loans backed by mortgage of residential / commercial properties, underlying single loans etc.

ABS/MBS instruments reflect the proportionate undivided beneficial interest in the pool of loans and do not represent the obligation of the issuer of ABS/MBS or the originator of the underlying receivables. Investments in securitised debt is largely guided by following factors:

- Attractive yields i.e. where securitised papers offer better yields as compared to the other debt papers and also considering the risk profile of the securitised papers.
- Diversification of the portfolio
- Better performance

Broadly following types of loans are securitised:

a) Auto Loans

The underlying assets (cars etc.) are susceptible to depreciation in value whereas the loans are given at high loan to value ratios. Thus, after a few months, the value of asset becomes lower than the loan outstanding. The borrowers, therefore, may sometimes tend to default on loans and allow the vehicle to be repossessed.

These loans are also subject to model risk. i.e. if a particular automobile model does not become popular, loans given for financing that model have a much higher likelihood of turning bad. In such cases, loss on sale of repossession vehicles is higher than usual.

Commercial vehicle loans are susceptible to the cyclical nature in the economy. In a downturn in economy, freight rates drop leading to higher defaults in commercial vehicle loans. Further, the second hand prices of these vehicles also decline in such economic environment.

b) Housing Loans

Housing loans in India have shown very low default rates historically. However, in recent years, loans have been given at high loan to value ratios and to a much younger borrower classes. The loans have not yet gone through the full economic cycle and have not yet seen a period of declining property prices. Thus the performance of these housing loans is yet to be tested and it need not conform to the historical experience of low default rates.

c) Consumer Durable Loans

- The underlying security for such loans is easily transferable without the bank's knowledge and hence repossession is difficult.
- The underlying security for such loans is also susceptible to quick depreciation in value. This gives the borrowers a high incentive to default.

d) Personal Loans

These are unsecured loans. In case of a default, the bank has no security to fall back on. The lender has no control over how the borrower has used the borrowed money. Further, all the above categories of loans have the following common risks:

- All the above loans are retail, relatively small value loans. There is a possibility that the borrower takes different loans using the same income proof and thus the income is not sufficient to meet the debt service obligations of all these loans.
- In India, there is no ready database available regarding past credit record of borrowers. Thus, loans may be given to borrowers with poor credit record.

- In retail loans, the risks due to frauds are high.

e) Single Loan PTC

A single loan PTC is a securitization transaction in which a loan given by an originator (Bank/ NBFC/ FI etc.) to a single entity (obligor) is converted into pass through certificates and sold to investors. The transaction involves the assignment of the loan and the underlying receivables by the originator to a trust, which funds the purchase by issuing PTCs to investors at the discounted value of the receivables. The PTCs are rated by a rating agency, which is based on the financial strength of the obligor alone, as the PTCs have no recourse to the originator.

The advantage of a single loan PTC is that the rating represents the credit risk of a single entity (the obligor) and is hence easy to understand and track over the tenure of the PTC. The primary risk is that of all securitized instruments, which are not traded as often in the secondary market and hence carry an illiquidity risk. The structure involves an assignment of the loan by the originator to the trustee who then has no interest in monitoring the credit quality of the originator. The originator that is most often a bank is in the best position to monitor the credit quality of the originator. The investor then has to rely on an external rating agency to monitor the PTC. Since the AMC relies on the documentation provided by the originator, there is a risk to the extent of the underlying documentation between the seller and underlying borrower.

Specific Risks in Debt Markets and Capital Markets (Risks associated with Debt / Money Markets (i.e. Markets in which Interest bearing Securities or Discounted Instruments are traded)

Investments in Financial Instruments are faced with the following kinds of risks.

a) Credit Risk:

Securities carry a Credit risk of repayment of principal or interest by the borrower. This risk depends on micro-economic factors such as financial soundness and ability of the borrower as also macro-economic factors such as Industry performance, Competition from Imports, Competitiveness of Exports, Input costs, Trade barriers, Favourability of Foreign Currency conversion rates, etc.

Credit risks of most issuers of Debt securities are rated by Independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"), with about 6 distinct ratings between the two extremes.

The highest credit rating (i.e. lowest credit risk) commands a low yield for the borrower. Conversely, the lowest credit rated borrower can raise funds at a relatively higher cost. On account of a higher credit risk for lower rated borrowers lenders prefer higher rated instruments further justifying the lower yields.

b) Price-Risk or Interest-Rate Risk:

From the perspective of coupon rates, Debt securities can be classified in two categories, i.e., Fixed Income bearing Securities and Floating Rate Securities. In Fixed Income Bearing Securities, the Coupon rate is determined at the time of investment and paid/received at the predetermined frequency. In the Floating Rate Securities, on the other hand, the coupon rate changes - 'floats' - with the underlying benchmark rate, e.g., MIBOR, 1 yr. Treasury Bill.

Fixed Income Securities (such as Government Securities, bonds, debentures and money market instruments) where a fixed return is offered, run price-risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, the payment-frequency of such coupon, days to maturity and the increase or decrease in the level

of interest rates. The prices of Government Securities (existing and new) will be influenced only by movement in interest rates in the financial system. Whereas, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced not only by the change in interest rates but also by credit rating of the security and liquidity thereof.

Floating rate securities issued by a government (coupon linked to treasury bill benchmark or a real return inflation linked bond) have the least sensitivity to interest rate movements, as compared to other securities. The Government of India has already issued a few such securities and the Investment Manager believes that such securities may become available in future as well. These securities can play an important role in minimizing interest rate risk on a portfolio.

c) Risk of Rating Migration:

The following table illustrates the impact of change of rating (credit worthiness) on the price of a hypothetical AA rated security with a maturity period of 3 years, a coupon of 10.00% p.a. and a market value of Rs. 100. If it is downgraded to A category, which commands a market yield of, say, 11.50% p.a., its market value would drop to Rs. 98.76 (i.e. 1.24%) If the security is up-graded to AAA category which commands a market yield of, say, 9.60% p.a. its market value would increase to Rs103.48 (i.e. by 3.48%). The figures shown in the table are only indicative and are intended to demonstrate how the price of a security can be affected by change in credit rating.

Rating	Yield (% p.a.)	Market Value (Rs.)
AA	11.00	100.00
If upgraded to AAA	9.60	103.48
If downgraded to A	11.50	98.76

d) Basis Risk:

During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio. Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve.

e) Spread Risk:

In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However depending upon the market conditions the spreads may move adversely or favourably leading to fluctuation in NAV.

f) Reinvestment Risk:

Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently the proceeds may get invested at a lower rate.

g) Liquidity Risk:

The corporate debt market is relatively illiquid vis-a-vis the government securities market. There could therefore be difficulties in exiting from corporate bonds in times of uncertainties. Liquidity in a scheme therefore may suffer. Even though the Government Securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through. In view of this, redemption may be limited or suspended after approval from the Boards of Directors of the AMC and the Trustee, under certain circumstances as described in the Statement of Additional Information (SAI).

Risk Associated with Investment in Derivatives Market

Derivative products are leveraged instruments and can provide

disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investment

B. Requirement of Minimum Investors in the Scheme

A. Type of the schemes: (common for all schemes)

Debt Oriented Interval Fund

B. What is the investment objective of the schemes? (common for all schemes)

The investment objective of the each Scheme is to generate returns through investments in debt and money market instruments.

C. How will the scheme allocate its assets?

The asset allocation under each Scheme, under normal circumstances, will be as follows:

Investments	Indicative Allocation (% to net assets)	Risk Profile
*Debt and Money Market instruments and government securities	100	Low to medium

*Debt instruments shall be deemed to include securitised debts (excluding foreign securitised debt) and investment in securitised debts shall not exceed 50% of the net assets of the Scheme.

Pending deployment of the funds of the Scheme in terms of the investment objective, the Fund can invest the funds of the Scheme in short term deposits of scheduled commercial banks as per the guidelines given in SEBI Circular no. SEBI/IMD/CIR No. 1/91171/07 dated April 16 2007.

The Scheme may hold cash from time to time.

The asset allocation shown above is indicative and may change for a short term on defensive considerations. When the allocation of securitised debt in the portfolio goes above 50%, review and rebalancing will be conducted within 10 Business days.

Overview of Debt Market

The Indian Debt Market has grown in size substantially over the years. The Reserve Bank of India has been taking steps to make the Indian Debt Market efficient and vibrant. The interest rates were regulated till a few years back, there has been rapid deregulation and currently both the lending and deposit rates are market determined. The Central banker has in its recent credit policy meetings suggested the importance of a fully developed corporate bond market and efforts are being made to have an online trading platform for corporate bonds.

Broadly, the debt market is divided in two parts viz. the Money Market and the Debt market. Money market instruments have a tenor of less than one year while debt market instruments have a tenor of more than one year. Money market instruments are typically commercial paper, certificates of deposit, treasury bills, trade bills, repos, interbank call deposit receipts etc. Debt market comprises typically of securities issued by Governments (Central and State), Banks, Financial Institutions, and Companies in the private and public sector, Corporations, Statutory Bodies etc.

The debt securities are mainly traded over the telephone directly or through brokers. The National Stock Exchange of India has a separate trading platform called the Wholesale Debt Market

segment where trades put through member brokers are reported. The daily volumes in the debt market are in the region of Rs. 2500-5000 crores.

RBI has introduced the Negotiated Dealing System (NDS) platform for screen-based trading in Government Securities and Money Market instruments. Most of the market participants are now operating through NDS.

Promoted by major banks and financial institutions, The Clearing Corporation of India Ltd. (CCIL), was incorporated on April 30, 2001. The CCIL guarantees the settlement of all trades executed through NDS. The clearing and settlement risks viz., Counter party Credit Risk and Operational Risk are mitigated by CCIL thereby facilitating a smooth settlement process.

The following table gives approximate yields prevailing as on April 22, 2010 on some of the money and debt market instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing.

Investments	Yield Range (% per annum)
Inter bank Call Money	3.70% - 3.90%
91 Day Treasury Bill	4.15% - 4.20%
364 Day Treasury Bill	5.00% - 5.15%
P1+ Commercial Paper 90 Days	4.30% - 4.50%
3-Year Government of India Security	6.60% - 6.70%
5-Year Government of India Security	7.50% - 7.60%
10-Year Government of India Security	7.90% - 8.00%

Generally, for instruments issued by a non-Government entity, the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on the credit rating of the entity. Investors must note that the yields shown above are the yields prevailing on April 22, 2010 and they are likely to change consequent to changes in economic conditions and RBI policy.

D. Where will the scheme invest

The amount collected under the scheme will be invested only in debt and money market instruments. Subject to the Regulations, the amount collected under the scheme can be invested in any (but not exclusively) of the following securities/ debt instruments:

- a. Securities created and issued by the Central and State Governments and/or repos/reverse repos in such Government Securities as may be permitted by RBI (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills).
- b. Securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills).
- c. Debt obligations of domestic Government agencies and statutory bodies, which may or may not carry a Central/State Government guarantee
- d. Corporate debt (of both public and private sector undertakings).
- e. Obligations/ Term Deposits of banks (both public and private sector) and development financial institutions
- f. Money market instruments permitted by SEBI/RBI, having maturities of up to one year or in alternative investment for the call money market as may be provided by the RBI to meet the liquidity requirements.
- g. Certificate of Deposits (CDs).
- h. Commercial Paper (CPs).
- i. Securitised Debt, not including foreign securitised debt.
- j. The non-convertible part of convertible securities.
- k. Any other domestic fixed income securities as permitted by SEBI/ RBI from time to time.
- l. Derivative instruments like Interest Rate Swaps, Forward Rate Agreements and such other derivative instruments permitted by SEBI/RBI.
- m. Any other instruments / securities, which in the opinion of the

fund manager would suit the investment objective of the scheme subject to compliance with extant Regulations.

The securities/debt instruments mentioned above could be listed or unlisted, secured or unsecured, rated or unrated and of varying maturities and other terms of issue. The securities may be acquired through Initial Public Offerings (IPOs), secondary market operations, private placement, rights offer or negotiated deals. The Schemes may also enter into repurchase and reverse repurchase obligations in all securities held by it as per guidelines/regulations applicable to such transactions.

Interest Rate Swap (IRS)

IRS is a widely used derivative product in the financial markets to manage interest rate risk. A typical transaction is a contract to exchange streams of interest rate obligation/income on a notional principle amount with a counter party, usually a bank. The two interest streams are, fixed rate on one side and floating rate on the other.

Example: Suppose the Fund holds a fixed rate bond of maturity 5 years carrying a fixed interest rate (coupon) of 6% p.a. payable half yearly. Such an investment runs the risk of depreciation if interest rates rise. To manage this risk, the Fund can enter into an IRS with another market participant, here the Fund contracts to pay fixed rate, say 6.75% p.a., and receive a floating rate (say overnight MIBOR). This transaction is done for a notional principal amount equal to the value of the investment. By such a contract a fixed rate income is offset by a fixed rate payment obligation leaving only a floating rate income stream. Thus, without actually investing in a floating rate asset, the Fund starts earning a floating rate income, reducing the risk of depreciation associated with the fixed rate investment. Following table summarises the cash flow streams:

Original investment	6% p.a.
Pay (Fixed rate)	5.25% p.a. (IRS)
Receive (Floating rate)	MIBOR
Net Flow	MIBOR + 0.75% p.a. (*)

* (6% p.a. 5.25 % p.a.)

The floating rate reference is defined in the swap agreement.

The above example illustrates a case of fixed to floating rate swap. A swap could be done to move from floating rate to fixed rate in a similar fashion.

Please note that the above example is hypothetical in nature and the interest rates are assumed. The actual return may vary based on actual and depends on the interest rate prevailing at the time the swap agreement is entered into.

E. What are the investment strategies?

For the purpose of achieving the investment objective, each Scheme and the Plans will invest in a portfolio of Debt and Money Market securities only maturing on or before the interval period of each Plan.

The AMC has an internal policy for selection of assets of the portfolio. The portfolio is constructed taking into account ratings from different rating agencies, rating migration, credit premium over the price of a sovereign security, general economic conditions and such other criteria. Such an internal policy from time to time lays down maximum/minimum exposure for different ratings, norms for investing in unrated paper, liquidity norms, and so on. Through such norms, the Scheme is expected to maintain a high quality portfolio and manage credit risk well.

Investment in unrated debt securities will be made with the prior approval of the Board of the AMC. Such investments would be within the parameters approved by the Board of the Trustee. Where the proposed investment is not within the parameters as mentioned above, approval of the Boards of both the AMC and the Trustee will be taken before making the investment. Investment in unrated debt securities will be made subject to prescribed SEBI Regulations.

Investments may be made in instruments, which, in the opinion of the Fund Manager, are of an acceptable credit risk and chance

of default is minimum. The Fund Manager will generally be guided by, but not restrained by, the ratings announced by various rating agencies on the assets in the portfolio.

To avoid duplication of portfolios and to reduce expenses, the Scheme may invest in any other Scheme of the Fund to the extent permitted by the Regulations. In such an event, as per the Regulations, the AMC cannot charge management fees on the amounts of the Scheme so invested.

Risk Control Measures for investment strategy

The internal systems have all the SEBI limits incorporated. This ensures that all limits are tracked at the entry stage itself. The system has the capability to move certain deals directly to the compliance cell in case they are beyond certain prescribed parameters. The deals then cannot proceed further without the approval of compliance on line. Also all deals are concurrently checked by a team of external auditors to ensure that the deals are compliant. Thus a two level check is in place to ensure no breach of limit occurs.

F. Fundamental attributes

Following are the fundamental attributes of the scheme, in terms of Regulation 18 (15A) of SEBI (MF) Regulations:
