

Kotak Bond Short Term

About KotakBond Short Term Plan

The investment objective of Kotak Bond Short Term is to provide reasonable returns and high level of liquidity by investing in debt and money market instruments of different maturities so as to spread the risk across different kind of issuers in the debt market. The scheme invests at shorter end of the yield and seeks to provide the benefit of higher carry to its investors as the case may arrive from time to time. The scheme is suitable for investors who may generally want to position themselves at the shorter end of the yield curve with a time horizon of 3 to 6 months.

Portfolio Action

We believe that key policy rates may start to ease from Q1 - FY 13 as the stance changes from "growth focus" to "inflation focus". CRR cut may be effected earlier so as to allow the system to breathe easy on liquidity. Inflation is expected to ease off further in the 1st half of 2012 due to base effect and the softening impact of the primary articles. However, the currency may continue to remain under pressure in near term, and range bound for most part of the year. The 10 year G-sec yield may hover in the band of 7.75% to 8.25% for the year. Intermittently, either end of bands could be breached in response to ad-hoc news.

The scheme consequently remains optimistic on the evolving market conditions and is inclined to obtain portion in the 6 month, 9 month and 1 year segment of the yield curve. We believe that the likely steepening of the curve on account of improved market conditions may provide competitive performance opportunities in this band. The scheme's allocation in the AAA/P1+ segment is at around 86.7% and is indicative of high asset quality. Moreover, we believe that the interim rally in the gilt has widened the corridor between the commensurate G-sec-AAA segment. Therefore, in the eventuality of improved market conditions, potential performance possibilities may emerge in the bond segment. The YTM of the scheme remains unchanged at 9.8%.
